

# FIRE TESTING

## Flammability of Materials

### Fire Testing to Determine Code Compliance

Fire safety standards help manufacturers to design and build better, safer products – and this saves lives. ICC-ES offers Fire Resistance testing and Reaction to Fire testing to a variety of industries, including fire testing of building materials, to ensure that products are safe and meet the requirements of relevant standards and codes.

### Industries Served

- ▶ Building and Construction
- ▶ Recreational Vehicle
- ▶ Manufactured Housing
- ▶ Transportation
- ▶ Coal Mine Safety and Health

Whether small-scale benchtop testing or large-scale testing, ICC-ES has the capabilities and experience to provide Fire Resistance and Reaction to Fire test data needed to meet regulatory requirements, code compliance, and certification. With leading-edge fire testing equipment and state-of-the-art facility in Bryan, Texas, ICC-ES is one of the top fire testing labs in the U.S. and is dedicated to providing fast and comprehensive Fire Resistance and Reaction to Fire test data for a variety of materials, products, and assemblies.
