

ICC
EVALUATION
SERVICE®

Why Canadian Building Officials Trust ICC-ES

ICC Evaluation Service (ICC-ES) provides national-level certification of construction products to the National Building, Fire, Plumbing and Energy codes for innovative products.

A global non-profit organization with 90+ years of experience in construction product evaluation, we have issued evaluations to more than 5,000 codes and standards in more than 50 countries.

All Evaluation Service Reports (ESRs) are ISO/IEC 17065 compliant certifications to Canadian codes, making ICC-ES one of the most robust options for code compliance available. What sets ICC-ES apart from a traditional certification body is our ICC-ES-developed Acceptance Criteria. These standard-like documents are produced through a rigorous and transparent process that includes public comment scrutiny and approval by a committee of Canadian building officials.

Why trust ICC-ES?

- Non-profit organization focused on public safety
- Canadian-licensed engineers on staff
- Acceptance Criteria approved by Canadian building officials
- SCC-accredited product certification and testing capabilities
- ANAB-accredited code evaluation body
- Fast, reliable technical support for all evaluations

The benefits of ICC-ES for Canada

- Increased capacity for innovation in Canada – building better and faster!
- Interprovincial and international harmonization (lowers barriers to trade and costs)
- Reduced effort for approvals (generally no alternative solutions proposal required)
- Trusted process – ISO/IEC 17065 compliance means in plant monitoring of building product manufacturing
