# **1.0 EVALUATION SCOPE**

# Compliance with the following codes:

- 2021, 2018, 2015, 2012 and 2009 *International Building Code*® (IBC)
- 2021, 2018, 2015, 2012 and 2009 *International Residential Code*® (IRC)
- 2013 Abu Dhabi International Building Code (ADIBC)<sup>†</sup>

<sup>†</sup>The ADIBC is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

## **Properties evaluated:**

| PROPERTY  | IBC CHAPTER | IRC CHAPTER |
|---|-------------|-------------|
| Exterior insulation and finish systems (EIFS)   | 14          | R7          |
| Weather resistance  | 14          | R7          |
| Fire-resistance-rated construction  | 7           | R3          |
| Special inspections   | 17          | NA          |
| Structural – transverse wind load resistance  | 16          | R6          |
| Types I-IV (noncombustible) construction [Outsulation <sup>®</sup> (MD, Plus MD, LCMD, X and Masonry Veneer)] | 26          | NA          |
| Surface burning characteristics   | 26          | R3          |
| Ignition resistance   | 26          | NA          |

# **2.0 USES**

The Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X, Masonry Veneer) are exterior insulation and finish systems (EIFS) complying with 2021 and 2018 IBC Section 1407 (2015, 2012 and 2009 IBC Section 1408) and IRC Section R703.9. The systems comply as EIFS with drainage in accordance with 2021 and 2018 IBC Section 1407.4.1 (2015, 2012 and 2009 IBC Section 1408.4.1) and IRC Section R703.9.

Page 1 of 13

The systems may be used in fire-resistance-rated Type V construction, when installed in accordance with Section 4.6 of this report. Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, LCMD X and Masonry Veneer) can be used in Types I, II, III and IV construction when installed in accordance with Section 4.5 of this report.

# **3.0 DESCRIPTION**

# 3.1 System Components:

See <u>Table 1</u>. The systems consist of water-resistive barriers, insulation board, basecoat, reinforcing mesh and finish.

## 3.2 Insulation Board:

**3.2.1** Insulation boards for the Outsulation<sup>®</sup> (MD, Plus MD, RMD, LCMD and Masonry Veneer) Systems: Insulation must be one of the following:

- EPS insulation board complying with ASTM C578, Type I, and ASTM E2430, produced by a molder with a current ICC-ES evaluation report. The board must be labeled in accordance with the applicable report. EPS insulation board must have a flame-spread index of 25 or less and a smoke developed index of 450 or less when tested in accordance with ASTM E84 or UL 723.
- EPS insulation board complying with ASTM C578, Type I, and ASTM E2430, produced by a molder who participates in an approved third-party quality-assurance program. The board must be labeled in accordance with the applicable code. EPS insulation board must have a flame-spread index of 25 or less and a smoke developed index of 450 or less when tested in accordance with ASTM E84 or UL 723.
- ThermalStar EIFS by Atlas Molded Products, A Division of Atlas Roofing Corporation, as recognized in ICC-ES evaluation report <u>ESR-1962</u>.

Insulation boards for the Outsulation<sup>®</sup> Plus MD system may also be BASF Neopor Type I Rigid Foam Insulation Boards complying with ASTM C578, Type I, and ASTM E2430, produced by a molder who participates in an approved third-party quality-assurance program. The boards must be labeled in accordance with the applicable code.

**3.2.2 Insulation boards for the Outsulation**<sup>®</sup> **SMD System:** Insulation must be Stucco Shield by Atlas Roofing Corporation, a rigid polyisocyanurate foam core insulation board, complying with ASTM C1289 as Type II, Class 2 with glass-fiber facings. Stucco Shield must have a flame spread index of 25 or less and a smoke-developed index of 450 or less when tested in accordance with ASTM E84 or UL723 and must be listed with an approved third-party quality assurance program.

**3.2.3** Insulation boards for the Outsulation<sup>®</sup> X System: Insulation must be DuPont de Nemours, Inc. Styrofoam<sup>M</sup> Panel Core 20 extruded polystyrene (XPS) foam plastic complying with ASTM C578, Type X, as described in ICC-ES evaluation report <u>ESR-2142</u>.

## 3.3 Substrates:

Substrates must be one of the following:

- Gypsum sheathing board complying with ASTM C1396 or ASTM C1177. When used as part of a fireresistive-rated assembly, the gypsum wallboard must be Type X with a minimum thickness of <sup>5</sup>/<sub>8</sub> inch (15.9 mm)
- Unglazed brick or concrete masonry complying with the code
- Concrete complying with the code
- Exterior plaster complying with the code
- Exposure 1 wood structural panels complying with DOC PS-1 or PS-2

## 3.4 Sealants:

Sealants must comply with ASTM C920, Type S or M, minimum Grade NS, minimum Class 25 and Use O.

# 4.0 INSTALLATION

# 4.1 General:

The Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) must be installed in accordance with 2021 and 2018 IBC Section 1407 (2015, 2012 and 2009 IBC Section 1408), IRC Section R703.9 and the manufacturer's application instructions, specifications and installation details. The manufacturer's application instructions for each system can be found at the locations noted in <u>Table 1</u>.

# 4.2 Drainage:

**4.2.1 Outsulation**<sup>®</sup> **MD System:** Drainage is provided by vertically grooved EPS insulation boards, with <sup>1</sup>/<sub>4</sub>-inch-deep-by-1-inch-wide (6.4 mm by 25.4 mm) grooves spaced 12 inches (305 mm) on center along with a Dryvit Vent Assembly.

**4.2.2 Outsulation® Plus MD System:** Drainage is provided by applying Primus, Genesis, or Genesis DM adhesive in a vertical notched trowel configuration between the water-resistive barrier and the flat EPS insulation board.

**4.2.3 Outsulation® RMD System:** Drainage must be provided between the insulation board and the water-resistive barrier by using one of the following:

- System 1: Dryvit Drainage Mat, which is a blue-colored, <sup>1</sup>/<sub>8</sub>-inch-thick (3.2 mm) mat composed of openweave polymer threads and the mat is used to separate the insulation board from the water-resistive barrier.
- System 2: Tyvek StuccoWrap as described in ICC-ES evaluation report <u>ESR-2375</u>. When Tyvek StuccoWrap-Style 1062X is used as a drainage medium, the Tyvek StuccoWrap is also the water-resistive barrier.
- **System 3:** Grooved insulation board, 1<sup>1</sup>/<sub>2</sub> to 4 inches (38 to 102 mm) thick, with vertical grooves measuring <sup>1</sup>/<sub>8</sub> inch (3.2 mm) deep by 1 inch (25.4 mm) wide spaced 4 inches (102 mm) on center.
- System 4: Notched-trowel application of the Dryvit adhesive in a vertical orientation on the backside of the flat EPS insulation board, with a trowel having <sup>3</sup>/<sub>8</sub>-inch-wide-by-<sup>1</sup>/<sub>2</sub>-inch deep (9.5 mm by 12.7 mm) notches spaced 1<sup>1</sup>/<sub>2</sub> inches (38 mm) on center.
- System 5: Expanded metal lath: Galvanized expanded metal lath, minimum 2.5 lbs/yd<sup>2</sup> (195 or 266 kg/m<sup>2</sup>). Lath must meet Federal Specification QQ-L-101C.

**4.2.4 Outsulation® SMD System:** Drainage spacer, which is a polyethylene spacer measuring <sup>1</sup>/<sub>8</sub> inch thick by 3 inches wide (3.2 mm by 76 mm).

## 4.2.5 Outsulation<sup>®</sup> LCMD System:

- **System 1:** Drainage mat: A mat supplied by Dryvit Systems, made of continuous nylon filaments fused at their intersections. Ninety-five percent of the matting is open.
- System 2: DuPont<sup>™</sup> Tyvek StuccoWrap<sup>®</sup>- Style 1062X (see <u>ESR-2375</u>).
- System 3: Channeled insulation board: Insulation board must be manufactured in accordance with Dryvit Specification DS131 and be supplied by a Dryvit-listed board supplier. The board supplier must participate in an approved third-party quality assurance program. The grooves are <sup>1</sup>/<sub>4</sub> inch deep by 1 inch wide (6.4 mm by 25.4 mm) and are spaced at 4 inches (102 mm) on center.
- **System 4:** Expanded metal lath: Galvanized expanded metal lath, minimum 2.5 lbs/yd<sup>2</sup> (195 kg/m<sup>2</sup>). Lath must meet Federal Specification QQ-L-101C.
- System 5: Ultra Lath: PLASS-T-LATH, manufactured by Plastic Components, Inc., is an alternative to galvanized metal lath.

**4.2.6 Outsulation**<sup>®</sup> **X System:** Drainage must be provided between the flat DuPont de Nemours, Inc. Styrofoam<sup>™</sup> insulation board and the water-resistive barrier coating by notched-trowel application of the Genesis adhesive mixture in a vertical orientation on the back side of the flat insulation board, with a trowel having  $3/_8$ -inch-wide-by- $1/_2$ -inch-deep (9.5 mm by 12.7 mm) notches spaced  $1^{1}/_2$  inches (38 mm) on center.

**4.2.7 Outsulation<sup>®</sup> Masonry Veneer System:** Drainage is provided by applying Primus adhesive in a vertical notched trowel configuration between the water-resistive barrier and the flat EPS insulation board.

# 4.3 Wind Design:

<u>Table 2</u> describes specific assemblies for which test data has been submitted. Other assemblies may be considered for approval by local code officials based on testing and/or calculations of a qualified design professional.

## 4.4 Weather Protection:

The Dryvit Oustulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) comply with 2021 and 2018 IBC Section 1402.2 (2015, 2012 and 2009 IBC Section 1403.2) and IRC Section R703.1.1.

## 4.5 Types I, II, III and IV Construction:

<u>Table 3</u> describes assemblies using the Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, LCMD, X and Masonry Veneer) that are qualified for use in Types I through IV construction.

### 4.6 Fire-resistance-rated Construction Assemblies:

<u>Table 4</u> describes assemblies using the Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) that are qualified for use in nonload-bearing and load-bearing fire-resistance-rated construction. In Type V construction, the Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) may be attached to the surface of combustible exterior fire-resistance-rated assemblies described in 2021, 2018, 2015 and 2012 IBC Table 721.1(2) [2009 IBC Table 720.1(2)] without changing the assigned hourly rating of the assembly. The exterior wall must have a minimum 10-foot (3048 mm) separation distance from adjacent construction.

## 4.7 Mechanical Fasteners:

To qualify the adequacy of fasteners in concrete or masonry substrates, a tension-load test program, consisting of fastener withdrawal from the applicable wall(s) of the building(s) at the location in question, must be implemented. The testing must be conducted by an approved testing laboratory. The average withdrawal strength, in pounds, must be six times the design wind pressure for the location in question. A minimum of five test per program is required, with results varying by no more than 15 percent from the average. If a minimum of 10 tests per program is conducted, variation from the average may be disregarded. For masonry substrates, a minimum of 40 percent of the tests must be run in masonry joints. Prior to installation of EIFS fasteners, a certificate of compliance, concerning test results relating to load requirements in the evaluation report, must be submitted to and approved by the code official.

## 4.8 Special Inspection:

For recognition under the IBC, special inspection of the Dryvit Backstop NT-Texture, Dryvit Backstop NT-Smooth, Dryvit Backstop NTX-Texture or Dryvit Backstop NTX-Smooth water-resistive coatings must be conducted in accordance with 2021, 2018 and 2015 IBC Sections 1704.2 and 1705.16.1 (2012 IBC Sections 1704.2 and 1705.15.1 and 2009 IBC Sections 1704.1 and 1704.14.1). See the Dryvit Third Party Inspection Guidelines for Owners and General Contractors/Construction Managers:

## www.dryvit.com/fileshare/doc/us/description/ds150.pdf

# 5.0 CONDITIONS OF USE:

The Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

- **5.1** Installation must comply with this report, the manufacturer's published application instructions, installation details and the applicable code. In the event of a conflict between the manufacturer's instructions and this report, this report governs.
- **5.2** The foam plastic insulation board(s) must be separated from the building interior by a thermal barrier complying with the applicable code.
- 5.3 Installation must be by applicators listed by Dryvit (Tremco CPG, Inc.).
- 5.4 Termination of the system must not be less than 6 inches (152 mm) above finished grade, in accordance with 2021, 2018, 2015 and 2009 IBC Section 2603.8 (2012 IBC Section 2603.9) and IRC Section R318.4 and 2021, 2018, 2015 IRC Section R703.9.2 (2012 and 2009 IRC Section R703.9.4.1).
- **5.5** Adequacy of fasteners for concrete, masonry, brick or portland cement plaster substrates must be demonstrated to the satisfaction of the code official by a proof-load test program consisting of fastener withdrawal from the wall. The average withdrawal strength, in pounds, must be six times the required fastener load.
- **5.6** The use of the Dryvit Outsulation<sup>®</sup> Masonry Veneer System must comply with the following:
- 5.6.1 The system is limited to use with precast stone veneer recognized in a current ICC-ES evaluation report demonstrating compliance with the ICC-ES Acceptance Criteria for Precast Stone Veneer (AC51). Installation of the precast stone veneer must be in accordance with Outsulation Masonry Veneer System Application Instructions and applicable requirements of the precast stone veneer manufacturer's report.
- **5.6.2** The thickness of the insulation board must not exceed 4 inches (102 mm).
- **5.6.3** The weight of the precast stone veneer must not exceed 15 lb/ft<sup>2</sup> (73 kg/m<sup>2</sup>) with no single unit greater than 30 lb (13.2 kg).
- **5.6.4** In jurisdictions adopting the IBC, the supporting wall must be designed to support the installed weight of the Masonry Veneer System. At wall openings, the supporting members must be designed to limit deflection to 1/600 of the span of the supporting members.

- **5.6.5** In jurisdictions adopting the IRC, where seismic provisions of IRC Section R301.2.2 apply, the average weight of the wall including the weight of the adhered veneer system must be determined. When this weight exceeds the applicable limits of 2021 and 2018 IRC Section R301.2.2.2 (2015, 2012 and 2009 IRC Section R301.2.2.2.1), an engineered design of the wall must be performed in accordance with IRC Section R301.1.3.
- 5.7 The products are manufactured under a quality control program with inspections by ICC-ES.

# **6.0 EVIDENCE SUBMITTED**

- **6.1** Data in accordance with the ICC-ES Acceptance Criteria for EIFS Clad Drainage Wall Assemblies (AC235), dated January 2015 (editorially revised July 2020).
- 6.2 Data in accordance with the ICC-ES Acceptance Criteria for Water-resistive Coatings Used as Waterresistive Barriers over Exterior Sheathing (AC212), dated February 2015 (editorially revised July 2020).
- **6.3** Data in accordance with the ICC-ES Acceptance Criteria for Foam Plastic Insulation (AC12), dated June 2015 (editorially revised December 2020).
- 6.4 Reports of tests in accordance with ASTM E2273, ASTM E2568 and ASTM E2570.
- 6.5 Reports of tests in accordance with ASTM E119, NFPA 285 and NFPA 268.

# **7.0 IDENTIFICATION**

- 7.1 The ICC-ES mark of conformity, electronic labeling, or the evaluation report number (ICC-ES ESR-1543) along with the name, registered trademark, or registered logo or the report holder must be included in the product label.
- 7.2 In addition, each container or package of the coating or reinforcing mesh used as part of the Dryvit Outsulation<sup>®</sup> Systems (MD, Plus MD, RMD, SMD, LCMD, X and Masonry Veneer) must be labeled with the Tremco CPG, Inc., name and address; the product name; lot or batch number; quantity of material; storage instructions; pot life; expiration date; and the evaluation report number (ESR-1543).

EPS insulation boards must be labeled with the manufacturer's name; manufacturing address or plant identification; name of the inspection agency; and the current ICC-ES evaluation report number.

<sup>1</sup>Refer to Section 3.2 for insulation boards. Insulation attachment must be in accordance with <u>Table 1</u> of this report.

<sup>2</sup>Refer to Section 4.2 for drainage mediums.

<sup>3</sup>Water-resistive barrier conforming with a standard referenced in the code or listed in a current ICC-ES evaluation report.

<sup>4</sup>Notched trowel adhesive, vertically applied, is used only when Dryvit Backstop NT or Dryvit Backstop NTX is used as the water-resistive barrier. <sup>5</sup>Fastener details and specifications as described in <u>Table 1</u> of this report.

<sup>6</sup>Higher weight meshes are permitted.

<sup>7</sup>Masonry veneer must be evaluated in a current ICC-ES evaluation report as complying with the requirements of ICC-ES AC51.

For **SI:** 1 inch = 25.4 mm; 1 psf = 0.0479 kPa.

<sup>1</sup>Installation of the EIFS system must be in accordance with <u>Table 1</u> of this report.

<sup>2</sup>Minimum specific gravity of 0.43.

<sup>3</sup>Maximum positive pressure is limited to the capacity of the framing and structural sheathing; or concrete, brick, concrete masonry or Portland cement plaster substrate, determined in accordance with the applicable code

<sup>4</sup>Framing members must be designed to resist all positive and negative transverse design loads with a maximum allowable deflection of <sup>1</sup>/<sub>240</sub> of the span for all systems except Masonry Veneer System; for Masonry Veneer system a maximum allowable deflection is <sup>1</sup>/<sub>360</sub> of the span.

<sup>5</sup>The tabulated allowable wind load is the lesser of the allowable load based on the applicable serviceability (deflection) limit (IBC Section 1604.3) and the strength limit (IBC Section 1604.2) using a safety factor of three.

**EVALUATION SUBJECT:** 

DRYVIT OUTSULATION® PLUS MD, OUTSULATION® RMD, OUTSULATION® SMD, OUTSULATION® LCMD, OUTSULATION® MD, OUTSULATION® X, OUTSULATION® MASONRY VENEER SYSTEMS

### 1.0 REPORT PURPOSE AND SCOPE

#### Purpose:

The purpose of this evaluation report supplement is to indicate that Dryvit Outsulation<sup>®</sup> Systems, described in ICC-ES evaluation report <u>ESR-1543</u>, have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

#### Applicable code editions:

- 2023 City of Los Angeles Building Code (LABC)
- 2023 City of Los Angeles Residential Code (LARC)

#### 2.0 CONCLUSIONS

The Dryvit Outsulation<sup>®</sup> Systems, described in Sections 2.0 through 7.0 of the evaluation report <u>ESR-1543</u>, comply with LABC Chapters 7, 14 and 26, and LARC Sections R316 and R703, and are subjected to the conditions of use described in this evaluation report supplement.

#### 3.0 CONDITIONS OF USE

The Dryvit Outsulation<sup>®</sup> Systems described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report ESR-1543.
- The design, installation, conditions of use and identification of the Dryvit Outsulation<sup>®</sup> Systems are in accordance with the 2021 International Building Code<sup>®</sup> (IBC) and 2021 International Residential Code<sup>®</sup> (IRC) provisions, as applicable, noted in the evaluation report <u>ESR-1543</u>.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.

This supplement expires concurrently with the evaluation report, reissued March 2024 and revised October 2024.

#### 1.0 REPORT PURPOSE AND SCOPE

#### Purpose:

The purpose of this evaluation report supplement is to indicate that the Dryvit Outsulation<sup>®</sup> Systems, described in ICC-ES evaluation report ESR-1543, has also been evaluated for compliance with the code(*s*) noted below.

#### Applicable code editions:

■ 2022 California Building Code (CBC)

For evaluation of applicable Chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) AKA: California Department of Health and Information (HCAI) and the Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.

■ 2022 California Residential Code (CRC)

#### 2.0 CONCLUSIONS

#### 2.1 CBC:

The Dryvit Outsulation<sup>®</sup> Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-1543, comply with CBC Chapter 7, 14, and 26 provided the design and installation are in accordance with the 2021 *International Building Code*<sup>®</sup> (IBC) provisions noted in the evaluation report, ESR-1543, and the additional requirements of CBC Chapters 16 and 17, as applicable.

The products have not been evaluated under Chapter 7A for use in the exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland-Urban Interface Fire Area.

2.1.1 OSHPD: The applicable OSHPD Sections and Chapters of the CBC are beyond the scope of this supplement.

**2.1.2 DSA:** The applicable DSA Sections and Chapters of the CBC are beyond the scope of this supplement.

#### 2.2 CRC:

The Dryvit Outsulation<sup>®</sup> Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-1543, comply with CRC Chapters 3 and 7, provided the design and installation are in accordance with the 2021 *International Residential Code*<sup>®</sup> (IRC) provisions noted in the evaluation report, ESR-1543.

The products have not been evaluated under CRC Section R337 for use in Exterior design and construction of new buildings located in a Fire Hazard Severity Zone within State Responsibility Areas or any Wildland-Urban Interface Fire Area.

The products described in this supplement have not been evaluated for compliance with the *International Wildland—Urban Interface Code*<sup>®</sup>.

This supplement expires concurrently with the evaluation report, reissued March 2024 and revised October 2024.

#### 1.0 REPORT PURPOSE AND SCOPE

#### Purpose:

The purpose of this evaluation report supplement is to indicate that Dryvit Outsulation<sup>®</sup> Systems, evaluated in ICC-ES evaluation report ESR-1543, have also been evaluated for compliance with the codes noted below.

#### Applicable code editions:

- 2023 Florida Building Code—Building
- 2023 Florida Building Code—Residential

#### 2.0 CONCLUSIONS

The Dryvit Outsulation<sup>®</sup> Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-1543, comply with the *Florida Building Code—Building Code—Residential*, as applicable. The design requirements must be determined in accordance with the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable. The installation requirements noted in ICC-ES evaluation report ESR-1543 for the 2021 *International Building Code*<sup>®</sup> meet the requirements of the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable, with the following condition:

Installation must meet the requirements of Section 1403.8 of the *Florida Building Code—Building* or Section R318.7 of the *Florida Building Code—Residential*, as applicable.

Use of the Dryvit Outsulation<sup>®</sup> Systems for compliance with the High-Velocity Hurricane Zone provisions of the *Florida Building Code—Building Code—Building Code—Residential* has not been evaluated and is outside the scope of this evaluation report.

For products falling under Florida Rule 61G20-3, verification that the report holder's quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the evaluation report, reissued March 2024 and revised October 2024.
