# ICC-ES Evaluation Report ESR-1271

DIVISION: 05 00 00—METALS Section: 05 05 23—Metal Fastenings

**REPORT HOLDER:** 

# **GRABBER CONSTRUCTION PRODUCTS, INC.**

# **EVALUATION SUBJECT:**

# **GRABBER SELF-DRILLING TAPPING SCREWS**

#### **1.0 EVALUATION SCOPE**

#### Compliance with the following codes:

- 2021, 2018, 2015, 2012 and 2009 International Building Code<sup>®</sup> (IBC)
- 2021, 2018, 2015, 2012 and 2009 *International Residential Code*<sup>®</sup> (IRC)
- 2013 Abu Dhabi International Building Code (ADIBC)<sup>†</sup>

 $^{\dagger}\text{The ADIBC}$  is based on the 2009 IBC. 2009 IBC code sections referenced in this report are the same sections in the ADIBC.

For evaluation for compliance with codes adopted by Los Angeles Department of Building and Safety (LADBS), see <u>ESR-1271 LABC and LARC Supplement</u>.

For evaluation for compliance with codes adopted by the California Office of Statewide Health Planning and Development (OSHPD) and Division of State Architects (DSA), see <u>ESR-1271 CBC and CRC Supplement</u>.

# **Property evaluated:**

Structural

# 2.0 USES

The Grabber self-drilling tapping screws described in this report are used in engineered connections of cold-formed steel framing and of sheet steel sheathing connected to cold-formed steel framing. The screws may be used under the IRC when an engineered design is submitted to the code official for approval in accordance with IRC Section R301.1.3.

# 3.0 DESCRIPTION

# 3.1 Grabber Self-Drilling Tapping Screws:

Grabber self-drilling tapping screws are proprietary selfdrilling tapping screws The screws are manufactured from carbon steel conforming to ASTM A510, Grades 1022 through 1026 and are heat treated and case hardened. The screws are coated with electrodeposited zinc with a coating

A Subsidiary of the International Code Council®

Reissued July 2023 This report is subject to renewal July 2024.

designation of Fe/Zn 3A or 3C in accordance with ASTM F1941 or a proprietary coating designated as GrabberGard. Table 1 provides screw descriptions (size, tpi), point styles, head style and drive descriptions, head diameters, nominal shank diameters, drilling capacities, minimum required protrusion lengths and coating descriptions. Screws are supplied in boxes of loose screws or collated for use in automated screw installation systems. See Figures 1 through 7 for depictions of the screws.

# 3.2 Cold-Formed Steel:

Cold-formed steel framing and sheet steel material must comply with one of the ASTM specifications listed in Section A3.1 of the AISI North American Specification for Design of Cold-Formed Steel Structural Members (AISI S100) (Section A2.1 of AISI S100 for the 2015, 2012 and 2009 IBC) and must have the minimum applicable specified tensile strength shown in the tables of this report. Base steel thickness must comply with Section B7.1 of AISI S100 (Section A2.4 of AISI S100 for the 2015, 2012 and 2009 IBC) and this report.

# 4.0 DESIGN AND INSTALLATION

#### 4.1 Design:

**4.1.1 General:** Selection of screw length must be based on the thickness of the fastened steel members plus the minimum required protrusion past the back of the supporting steel. Point selection must be based on the drilling capacity of the screw. See Table 1 for minimum required protrusion lengths and drilling capacities.

When tested for corrosion resistance in accordance with ASTM B117, the screws meet the minimum requirement listed in ASTM F1941, of no white corrosion after three hours and no red rust after 12 hours.

**4.1.2 Engineered Design:** Grabber self-drilling tapping screws may be used in engineered connections of cold-formed steel construction. Design of connections for use in Allowable Strength Design (ASD) must comply with Section J4 of AISI S100 (Section E4 of AISI S100 for the 2015, 2012 and 2009 IBC), using the tabulated values accompanying this report (Tables 2 through 5 or Tables 6 through 9 depending on fastener designation). The connection strength values are applicable to connections where the connected steel elements are in direct contact with one another. Design provisions for tapping screw connections subjected to combined shear and tension loading are outside the scope of this report.

ICC-ES Evaluation Reports are not to be construed as representing aesthetics or any other attributes not specifically addressed, nor are they to be construed as an endorsement of the subject of the report or a recommendation for its use. There is no warranty by ICC Evaluation Service, LLC, express or implied, as to any finding or other matter in this report, or as to any product covered by the report.

Under the 2021 IBC, for screws used in framing connections, in order for the screws to be considered fully effective, the minimum spacing between the fasteners must be 3 times the nominal screw diameter and the minimum edge distance must be 1.5 times the nominal screw diameter. Under the 2018, 2015, 2012 and 2009 IBC, for screws used in framing connections, in order for the screws to be considered fully effective, the minimum spacing between the fasteners and the minimum edge distance must be three times the nominal diameter of the screws, except when the edge is parallel to the direction of the applied force, the minimum edge distance must be 1.5 times the nominal screw diameter. When the spacing between screws is less than three times the nominal screw diameter, but at least two times the nominal screw diameter, the connection shear strength values in Table 3 must be reduced by 20 percent [Refer to Section B1.5.1.3 of AISI S240 (Section D1.5 of AISI S200 for the 2015, 2012 and 2009 IBC)].

For screws used in applications other than framing connections, the minimum spacing between the fasteners must be three times the nominal screw diameter and the minimum edge and end distance must be 1.5 times the nominal screw diameter. Additionally, under the 2009 IBC, when the distance to the end of the connected part is parallel to the line of the applied force, the allowable connection shear strength determined in accordance with Section E4.3.2 of Appendix A of AISI S100-07 must be considered.

Connected members must be checked for rupture in accordance with Section J6 of AISI S100 (Section E6 of AISI S100 for the 2015 IBC, Section E5 of AISI S100 for the 2012 and 2009 IBC).

#### 4.2 Installation:

Installation of Grabber self-drilling tapping screws must be in accordance with the manufacturer's published installation instructions and this report. The manufacturer's published installation instructions must be available at the jobsite at all times during installation.

The screws must be installed perpendicular to the work surface, using a variable speed screw driving tool set to not exceed 2,500 rpm. The screw must penetrate through the supporting steel with a minimum of three exposed threads protruding past the back side of the supporting steel.

# 5.0 CONDITIONS OF USE

The Grabber self-drilling screws described in this report comply with, or are suitable alternatives to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

**5.1** Fasteners must be installed in accordance with the manufacturer's published installation instructions and this report. In the event of a conflict between this report and the manufacturer's published installation instructions, the more restrictive governs.

- **5.2** The utilization of the screws described in this evaluation report in cold-formed steel deck diaphragms is outside the scope of this report. Diaphragms constructed using the screws must be addressed in a current ICC-ES evaluation report.
- **5.3** For ASD, the allowable screw strength or screw connection strength is not to be increased for short-duration loads such as wind or earthquake loads.
- **5.4** Evaluation of screws subjected to cyclic or fatigue loading is outside the scope of this report. Applicable Seismic Design Categories shall be determined in accordance with the code for the entire assembly constructed with the screws.
- **5.5** Drawings and calculations verifying compliance with this report and the applicable code must be submitted to the code official for approval. The drawings and calculations must be prepared by a registered design professional when required by the statutes of the jurisdiction in which the project is to be constructed.
- **5.6** The screws are manufactured under a quality control program with inspections by ICC-ES.

# 6.0 EVIDENCE SUBMITTED

Data in accordance with the ICC-ES Acceptance Criteria for Tapping Screw Fasteners Used in Steel-to-steel Connections (AC118), dated January 2018 (editorially revised December 2020).

# 7.0 IDENTIFICATION

- 7.1 The ICC-ES mark of conformity, electronic labeling, or the evaluation report number (ICC-ES ESR-1271) along with the name, registered trademark, or registered logo of the report holder must be included in the product label.
- **7.2** In addition, the heads of the Grabber self-drilling screws are marked (stamped) with a "G" or a special symbol as shown in Figure 1, and each container of fasteners has a label bearing the fastener description (size/diameter and length), model number, point type and coating.
- **7.3** The report holder's contact information is the following:

#### TABLE 1—GRABBER SELF-DRILLING TAPPING SCREW DIMENSIONAL CHARACTERISTICS (cont.)

For **SI:** 1 inch = 25.4 mm, 1 tpi = 0.03937 thread per mm.

<sup>1</sup>Head types: HWH = Hex Washer Head; HHWH = High Hex Washer Head; MTH = Modified Truss Head

<sup>2</sup>A "C" at the beginning of the model number designates collated screws
<sup>3</sup>The drilling capacity of a screw refers to minimum and maximum thickness of the steel that the screw is designed to drill through.
<sup>4</sup>Maximum load bearing length can be calculated by subtracting the minimum required protrusion length from the nominal length of the screws.

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N, 1ksi = 6.89 MPa.

<sup>1</sup>For tension connections, the least of the allowable pull-out, pull-over, and fastener tension strength found in Tables 2A, 3A, and 5, respectively must be used for design.

<sup>2</sup>To calculate LRFD values, multiply values in the table by the ASD safety factor of 3.0 and multiply again with the LRFD  $\Phi$  factor of 0.5.

| #10-22 Flat Pan                   | 0.183             | 138  | 192               | 239    | 470    | 149    |  |  |  |  |
| #12-18 Flat Pan                   | 0.211             | 149  | 208               | 270    | 354    | 627    |  |  |  |  |

For SI: 1 inch = 25.4 mm, 1 lbf = 4.45 N, 1ksi = 6.89 MPa.

<sup>1</sup>For tension connections, the least of the allowable pull-out, pull-over, and fastener tension strength found in Tables 2B, 3B, and 5, respectively must be used for design.

<sup>2</sup>The allowable pull-out capacity for other member thicknesses can be determined by interpolation within the table.

# TABLE 3A—ALLOWABLE TENSILE PULL-OVER STRENGTH ( $P_{NOV}/\Omega$ ), Ibf<sup>1,2,3</sup>

**EVALUATION SUBJECT:** 

# **GRABBER SELF-DRILLING TAPPING SCREWS**

# 1.0 REPORT PURPOSE AND SCOPE

# Purpose:

The purpose of this evaluation report supplement is to indicate that the Grabber self-drilling tapping screws, described in ICC-ES evaluation report <u>ESR-1271</u>, have also been evaluated for compliance with the codes noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

# Applicable code editions:

- 2023 City of Los Angeles Building Code (LABC)
- 2023 City of Los Angeles Residential Code (LARC)

# 2.0 CONCLUSIONS

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report <u>ESR-1271</u>, comply with the LABC Chapter 22, and the LARC, and are subject to the conditions of use described in this supplement.

# 3.0 CONDITIONS OF USE

The Grabber self-drilling tapping screws described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report ESR-1271.
- The design, installation, conditions of use and identification of the Grabber self-drilling tapping screws are in accordance with the 2021 *International Building Code*<sup>®</sup> (IBC) provisions noted in the evaluation report <u>ESR-1271</u>.
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 16 and 17, as applicable.
- Under the LARC, an engineered design in accordance with LARC Section R301.1.3 must be submitted.

This supplement expires concurrently with the evaluation report, reissued July 2023.

# 1.0 REPORT PURPOSE AND SCOPE

# Purpose:

The purpose of this evaluation report supplement is to indicate that Grabber self-drilling tapping screws, described in ICC-ES evaluation report ESR-1271, have also been evaluated for compliance with the codes noted below.

#### Applicable code editions:

■ 2022 California Building Code (CBC)

For evaluation of applicable Chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) AKA: California Department of Health Care Access and Information (HCAI) and the Division of State Architect (DSA), see Sections 2.1.1 and 2.1.2 below.

■ 2022 California Residential Code (CRC)

# 2.0 CONCLUSIONS

# 2.1 CBC:

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report ESR-1271, comply with CBC Chapter 22, provided the design and installation are in accordance with the 2021 *International Building Code*<sup>®</sup> provisions noted in the evaluation report and the additional requirements of the CBC Chapters 16 and 17, as applicable.

# 2.1.1 OSHPD:

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report ESR-1271, comply with CBC amended Chapter 22 and Chapter 22A, provided the design and installation are in accordance with the 2021 *International Building Code*<sup>®</sup> (IBC) provisions noted in the evaluation report and the additional requirements of CBC Chapter 16 and amendments [OSHPD 1R, 2, 3 and 5], Chapter 16A [OSHPD 1 and 4], amended Chapter 17 [OSHPD 1R, 2 and 5], Chapter 17A [OSHPD 1 and 4], amended Chapter 22 [OSHPD 1R, 2 and 5] and Chapter 22A [OSHPED 1 and 4], as applicable.

#### 2.1.2 DSA:

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report ESR-1271, comply with CBC amended Chapter 22 and Chapter 22A, provided the design and installation are in accordance with the 2021 *International Building Code*<sup>®</sup> (IBC) provisions noted in the evaluation report and the additional requirements of CBC amended Chapter 16 [DSA-SS/CC], Chapter 16A [DSA/SS], Chapter 17A [DSA-SS and DSA-SS/CC], Chapter 22 [DSA-SS/CC] and Chapter 22A [DSA-SS], as applicable.

#### 2.2 CRC:

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report ESR-1271, comply with the CRC, provided the design and installation are in accordance with the 2021 *International Residential Code*<sup>®</sup> provisions noted in the evaluation report.

This supplement expires concurrently with the evaluation report, reissued July 2023.

# 1.0 REPORT PURPOSE AND SCOPE

#### Purpose:

The purpose of this evaluation report supplement is to indicate that the Grabber self-drilling tapping screws, addressed in ICC-ES evaluation report ESR-1271, have also been evaluated for compliance with the codes noted below.

#### Applicable code editions:

- 2020 Florida Building Code—Building
- 2020 Florida Building Code—Residential

# 2.0 CONCLUSIONS

The Grabber self-drilling tapping screws, described in Sections 2.0 through 7.0 of the evaluation report ESR-1271, comply with the *Florida Building Code—Building* and the *Florida Building Code—Residential*, provided the design is in accordance with the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable. The installation requirements noted in the ICC-ES evaluation report ESR-1271 for the 2018 *International Building Code*<sup>®</sup> meet the requirements of the *Florida Building Code—Building* or the *Florida Building Code—Residential*, as applicable.

Use of the Grabber self-drilling tapping screws has also been found to be in compliance with the High-Velocity Hurricane Zone provisions of the *Florida Building Code—Building* and the *Florida Building Code—Residential*.

For products falling under Florida Rule 61G20-3, verification that the report holder's quality-assurance program is audited by a quality-assurance entity approved by the Florida Building Commission for the type of inspections being conducted is the responsibility of an approved validation entity (or the code official, when the report holder does not possess an approval by the Commission).

This supplement expires concurrently with the evaluation report, reissued July 2023.
